Key PowerSensor+™ Capability

General purpose power and scalar measurements

General Description

The LB589A is an easy to use high performance general purpose power meter and power sensor in one. It features high speed measurements and temperature compensated accuracy with superior in-class performance. The standard product can measure signals below -55 dBm.

Get up and running quickly with the supplied power meter panels. Use the supplied drivers and programming examples for ATE applications. Easily integrate the power sensors into Lab View, C, VB and other programming environments.

Integration and usability are further simplified because calibration and zeroing are not required before use and, you have the choice of selecting a male or female super SMA or 3.5 mm RF input connector.

Order option 003 for triggering on the RF input level and general TTL triggering. Order option 001 recorder out when a slow moving (<3 Hz) analog output is required.

Features

- Best in-class price
- Superior in-class performance
- Compact - 1/10 the volume of competitive sensors
- Ruggedized USB connector - does not fatigue or break like competitive sensors
- Trigger on the RF input level
- Fully calibrated over temperature
- Unlimited signal bandwidth measurements
- Offered with 30 day return policy

¹ Error term definitions: Mm (Mismatch); CF (Cal Factor); N (Noise); L (Linearity); T (Temperature); Z (Zero Offset). All error terms are converted to percentages for RSS calculation.

² Use the following formula to determine Zero Offset error (%): $Z = (\text{Zero Offset Power} / \text{Measured Power})100$.

³ Linearity and Zero Offset are measured as a combined specification as LadyBug sensors require no meter zeroing or reference calibration before use.
